

# Transportation Training Center

Client: Huntingdon County Career & Technology Center

Mill Creek, PA

Year: 2020 Cost: \$2,500,000

Gwin, Dobson & Foreman designed a Transportation Training Center for the Huntingdon County Career & Technology Center. The pre-engineered building will provide instruction in the automotive trades including collision repair, engine and mechanical drive systems and painting.

GD&F was responsible for the complete facility design including mechanical, electrical, plumbing, and general construction elements. Site-civil work included design of access roads, grading plans, gas/electric utility extensions, water and wastewater service lines, parking areas and stormwater management facilities.

A 7,500 SF classroom addition was designed for instruction in the carpentry and woodworking trades but was deleted from the project due to budget restrictions. The project was completed within the timeframe and budget parameters of the owner.
